Network and Operating Systems Support for Real-Time Multimedia

DISSERTATION

Presented in Partial Fulfillment of the Requirements for the

Degree Doctor of Philosophy in the Graduate

School of The Ohio State University

By

Frank Nathan Adelstein, B.S., M.S.,

forward stuff

To my friends and family

ACKNOWLEDGMENTS

Thanks to all the little people...

First, I wish to thank Mukesh, without whom this would not have been possible. Even with a tremendous number of advisees, he has always had time to work closely with me and maintain a detailed familiarity and involvement with my work. Through his guidance, my writing and research skills have substantially improved. Because of his genuine concern for his students and their work, he has my gratitude and respect.

I also with to thank my committee, Professors Arora and Panda, for their comments and time, especially considering the rush towards the end. I also wish to thank Professors Mamrak and Parent, my minor advisors; Professor Weide for useful advice upon entering the program.

I wish to acknowledge my friends, many current and former grad students in the department, for the help they have provided along the way. Mahendra, for advice on grad school, teaching pointers, an approved dissertation to look at, and a football rivalry. Manas, for the wisdom of his grad school (lengthy) experience and occasional tips. John, for someone to bridge the world of staff and grad students, for submitting my name to the computer committee, and a bunch of fun times.

To Nathan and Chris, for free food, friendship, someone to discuss ideas with. To Mowgli, for organizing volleyball and other stress releases. To Golden, for so many things, a comrade-in-arms, convincing me to stay on after the Masters, lots of fun times, improving my cooking skills and much food. And Ann for keeping Golden sane. Loren, another one of the few that made it through. There have been many grads that have made grad school a great experience, Pierce, Jim, Todd, Neel, Marc, Sara, Scott, Dave Ralley and Greg (and apologies to anyone I am forgetting). To Keith and Lisa for another grad student's point of view from different departments.

Working for the staff at CIS has allowed me to learn many practical things as well as work with some excellent people. To Steve, for being a good friend, boss, and systems guru; J, for comic books, perl scripts, a truely eclectic CD collection and interesting discussions; Bryan, for providing a lifeboat; Tami, for friendship, a sympathetic ear, M&Ms, and a fast machine to run my simulations on (without which, these last few weeks would have been even more nerve racking); Jim Curran, Ken, Marcus, and all the other IICF refugees.

To Catherine, Tom, Camilo, Lisa, Jim, Moof, Jim, and other members of The Collective Frank. For similar senses of humor, close friendship and a whole lot of memories -- no idea who they belong to though...

To Carl, for motivating me to finish my degree.

And finally, to my parents, for everything.

VITA

June 8, 1966.....Born - Cleveland, Ohio

1988.....B.S. Computer Engineering
University of Michigan
Ann Arbor, Michigan

1990.....M.S. Computer Science
The Ohio State University
Columbus, Ohio

1989 - 1994.....Graduate Administrative Associate,
The Ohio State University.

1993 - 1995.....Graduate Teaching Associate,
The Ohio State University.

LIST OF TABLES xii

LIST OF FIGURES xiii

I Introduction 1

1.1 Background and Motivations 1

1.2 Problem Statement and Contributions 6

1.2.1 Priority Ethernet 6

1.2.2 Real-Time Causal Order for Multimedia 7

1.2.3 Causal Multicast 8

1.3 Organization of Dissertation 11

II Priority Ethernets: Multimedia Support on Local Area Networks 12

2.1 Introduction 12

2.2 State of the Art 14

2.3 Priority Protocols for Ethernet 17

2.3.1 Objectives 17

2.3.2 Issues Involved 18

2.4 Priority Protocol Transmission Techniques 21

2.4.1 Data Structures and Notations 22

2.4.2 Synchronous Method 23

2.4.3 Modified Synchronous Method 26

2.4.4 Asynchronous Method 30

2.4.5 Dissemination of Completed Transmission 33

2.5 Qualitative Analysis of the Methods 34

2.6 Simulation Study 39

2.6.1 System Model 40

2.6.2 Basic Ethernet Simulation 47

2.6.3 Synchronous Method Simulation 50

2.6.4 Modified Synchronous Method Simulation 58

2.6.5 Asynchronous Method Simulation 65

2.7 Summary 74

III Real-Time Causal Message Ordering in Multimedia Systems 77

3.1 Introduction 77

3.2 Preliminaries 81

3.2.1 Definitions 81

3.2.2 Problem Statement and Objective 86

3.3 The Delta Causal Order Algorithm 87

3.3.1 Data Structures and Notations 88

3.3.2 Overview 88

3.3.3 The Algorithm 89

3.3.4 Correctness 92

3.4 Performance 96

3.4.1 Loosely Synchronized Clocks 96

3.4.2 Discussion 97

3.4.3 Message Size and Complexity 98

3.5 Summary 102

IV Characterizing and Evaluating Performance Tradeoffs in Causal Multicasing in ATM Networks 104

4.1 Introduction 104

4.2 Background 106

4.2.1 System Model 106

4.2.2 Multicasting in ATM Networks 107

4.2.3 ATM Networks and Causal Multicasting 108

4.2.4 Previous Work 110

4.3 Characterizing Multicast Cost 111
4.3.1 Total Network Hops Used (S) 113
4.3.2 Efficiency of a Multicast (E) 116
4.3.3 Transmission Cost (C) 117
4.4 Cost Analysis of Two Causal Multicast Algorithms 118
4.4.1 Delta-Causal Multicast Method 119
4.4.2 Causal Order Multicast Method 120
4.4.3 Comparison of the two methods 121
4.5 Summary 124
V Partition Method For Real-Time Causal Order Multicast 126
5.1 Introduction 126
5.2 Partition Method 128
5.2.1 Basic Idea 128
5.2.2 Data Structures and Notations 130
5.2.3 The Algorithm 131
5.2.4 Correctness Argument 134
5.2.5 Selecting Elements in a Partition 135
5.3 Performance Results 136
5.3.1 Analytical Results 139
5.3.2 Partition Size 151
5.4 Summary 153

VI Conclusions and Future Directions 156

6.1 Summary of Contributions 158

6.1.1 Priority Ethernet 158

6.1.2 Causal Order 159

6.1.3 Causal Multicast 160

6.2 Future Directions 161
