Proposed

General Criteria
For
Accrediting Computing Programs

1. Objectives, Outcomes, and Assessment

The program has documented measurable objectives and expected outcomes for graduating students, based on the needs of the program's constituencies. The program uses a documented process to regularly assess the extent to which its objectives and expected outcomes are being met. The results of the assessments are used to develop and implement plans to effect continuous improvement of the program.

2. Student Support

Students can complete the program in a reasonable amount of time. Students have ample opportunity to interact with their instructors. Students are offered timely, qualified advising about the program's requirements and their career alternatives. Students who graduate from the program meet all program requirements.

3. Faculty Qualifications

Faculty members are current and active in the computing discipline associated with the program. Collectively, they have the technical breadth and depth necessary to support the program.

4. Faculty Size and Workload

There are enough faculty members to provide continuity and stability, to cover the curriculum reasonably, and to allow an appropriate mix of teaching, professional development and scholarly activities for each faculty member.

5. Curriculum

The program's requirements are consistent with its objectives and expected outcomes. The curriculum combines technical and professional requirements with general education requirements and electives to prepare students for a professional career and further study in the computing discipline associated with the program, and for functioning in modern society. The technical and professional requirements include up-to-date coverage of basic and advanced topics in the computing discipline associated with the program, and appropriate mathematics.

6. Technology Infrastructure

Computing resources are available, accessible, and adequately supported to enable students to achieve the program's expected outcomes and to support faculty teaching needs and scholarly activities.

7. Institutional Support and Financial Resources

The institution's support for the program and the financial resources available to the program are sufficient to provide an environment in which the program can achieve its objectives and expected

outcomes. Support and resources are sufficient to provide assurance that the program will retain its strength throughout the period of accreditation.

8. Institutional Facilities

Institutional facilities including the library, other electronic information retrieval systems, computer networks, classrooms, and offices are adequate to support the objectives and expected outcomes of the program.

PROPOSED
PROGRAM CRITERIA FOR
COMPUTER SCIENCE
AND SIMILARLY NAMED COMPUTING PROGRAMS
Lead Society: CSAB

These program criteria apply to computing programs using computer science or similar terms in their titles.

1. Objectives, Outcomes, and Assessment

The documented process incorporates relevant data in its assessment of the extent to which the program's objectives and expected outcomes are being met.

2. Faculty Qualifications

Individual faculty members have the technical breadth and depth consistent with their expected contributions to the program.

3. Faculty Size and Workload

The full-time faculty members assigned to the computer science program have the appropriate authority for the creation, delivery, evaluation, and modification of the program, and the responsibility for the consistency and quality of its courses. If advising is done by faculty members, then that component of the faculty workload is recognized. If faculty members install and maintain computing resources and laboratories then that component of the faculty workload is recognized.

4. Curriculum

Students have the following specified amounts of course work or an equivalent educational experience.

- Computer science: 40 semester hours
- Math: 15 semester hours that includes discrete mathematics
- Math and science combined: 30 semester hours

The computer science component of the program stresses theoretical foundations, problem analysis and solution design. The oral and written communications skills of the students are developed and applied within the program. All students are exposed to a broad range of issues relating to the social and ethical implications of computing. All students are provided with a substantial laboratory science experience.

5. Technology Infrastructure

Students in the computer science program receive appropriate guidance regarding the computing resources and laboratories available to the program. The computing resources and laboratories available to the program are properly maintained and upgraded as needed.

6. Institutional Support and Financial Resources

Institutional support and resources are sufficient for the program to attract and retain high-quality faculty, to administer the program effectively, and to acquire and maintain computing resources and laboratories.
